System and Bearing Protection*

INPRO/SEAL[®]

A DOVER COMPANY

Increase the Reliability of Your Rotating Equipment

Inpro/Seal® has been providing permanent bearing protection for rotating equipment for over 30 years.

Since inventing the original bearing isolator in 1977, Inpro/Seal® has upheld our commitment to deliver innovative sealing solutions and superior customer service; the right technology, right when you need it. Headquartered in Rock Island, Illinois, USA, Inpro/Seal maintains a global sales network to provide responsive, localized support to our customers worldwide.

You'll find our distinct product line installed on a variety of rotating equipment in the oil and gas, chemical, mining, pulp and paper, power generation, and general processing industries. Our technology increases the reliability of your applications and provides real cost savings by improving the mean time between repair (MTBR). Inpro/Seal system and bearing protection products offer a permanent solution to many of the costly maintenance problems that disrupt normal production.

All Inpro/Seal products are custom engineered to fit your exact requirements and optimized for performance in your specific application. Our outstanding customer service and streamlined production process allow for same day shipments on most products, including new designs. All of our products are manufactured according to quality standards certified to ISO 9001:2000.

For more than 30 years, Inpro/Seal has combined extensive application experience and field testing with a robust development process to create a superior solution for our customers. As part of Waukesha Bearings Corporation, an operating company of Dover (NYSE:DOV), we are committed to market leadership, ongoing investment in technology and a strong sense of partnership with our customers.
